

USER MANUAL

Attain Jr

A safe, offline-first reading + study companion for the littlest learners.

1. What is Attain Jr?

Attain Jr is the child-focused sibling of Attain. Same offline-first foundation, same dyslexia-friendly fonts, but designed from the ground up for pre-K through early elementary readers. Bigger buttons, picture-first cards, read-to-me by default, and zero network calls — nothing ever leaves the device.

Safety promise: No accounts. No tracking. No analytics. No ads. No in-app purchases. No external network calls. All progress stays on the iPad.

2. Install Attain Jr on your iPad

1. Open Safari → <https://dssorit.github.io/ancient-covenant-scrolls/attain-jr/>
2. Tap the **Share** icon → **Add to Home Screen**
3. Tap **Add**
4. The Attain Jr icon appears on your home screen — tap to launch full-screen

Storage: when iOS asks about persistent storage, allow it. Otherwise Safari may evict the app's books on memory pressure.

3. Parent / teacher first-run

Before handing the iPad to a child, walk through this once:

1. **Open Attain Jr.** First-run shows the parent setup screen.
2. **Set a 4-digit PIN.** This unlocks the parent dashboard later. Keep it where the child can't see it.
3. **Pick which books** the child can see (from any books you've uploaded).
4. **Hand to child.** They see only the picked books, big tiles, no settings, no sharing.

Parent dashboard later: tap-and-hold the Attain Jr logo for 3 seconds → enter your PIN → see time spent, stars earned, books visited.

4. Upload a book (parent / teacher)

1. From the parent setup, tap **Add a book**
2. Pick a file — PDF, EPUB, plain text, Word, or paste text directly
3. Wait for parsing — long PDFs may take 10-30s
4. The book appears in the parent library; tick the box to make it visible to the child

Best content: short children's books, picture books, simple chapter texts. Kids' Bible stories work well — Jonah / Stop the Lion are bundled as starting samples.

5. Child mode — what your kid sees

5.1 Splash + book picker

The first screen is bright and simple: 2-3 large book covers in a row, a big **Read to me** button, no menus, no settings. Tap any cover to open it.

5.2 Reader screen — picture-first

Each page shows:

- A big illustration (auto-generated or uploaded with the book)
- One sentence at a time, large dyslexia-friendly font
- Auto-play voice — every page reads itself unless muted
- Big ← previous and → next arrows
- Tap any word → it speaks the word and shows it bigger

5.3 Toolbar (top of reader)

Button	What it does
← Back	Return to the book picker
 Mute	Stops voice reading; tap again to resume
 Focus	Dims everything except the sentence the child taps
 Customize	Background color, character voices, reading aids — parent-set, hidden in child mode
Aa	Reading aids (font size, syllable hint)
 Paraphrase	Re-read the chapter in simpler words

5.4 Reading aids built-in

- **Atkinson Hyperlegible** font default; OpenDyslexic available
- **Sentence focus** — current sentence highlighted, rest dim
- **Syllable split** — long-press a word to break it into syllables
- **Big touch targets** — every button at least 56×56pt
- **Generous spacing** — line height 1.6 default for easy tracking

6. Study activities (the games)

After a book or chapter, tap  **Play** to open the activity menu. All eight modes are tap-only — no typing required.

1. Flashcards

Picture on front, word on back. Tap to flip, swipe to mark "got it" or "try again".

2. Fill in the Blank

Sentence with a missing word. Three big picture-buttons — tap the right one.

3. Rhyme Chain

"Cat ... ?" — tap the picture that rhymes. Builds phonemic awareness.

4. Syllable Tap

Word breaks into syllables on screen — tap each one in order as the voice says them.

5. Who Said It

Hear a quote from the story → tap which character spoke it.

6. Audio Fill the Gap

Voice reads a sentence with a silent gap — tap the word that fits.

7. Story Sequence

Drag pictures into the order events happen in the chapter.

8. Dictation

Voice says a short sentence — tap word-tiles to build the sentence in order.

6.1 How it celebrates correct answers

- Sparkle animation, cheerful sound, "Yay!" or "You got it!"
- A star drops into the rewards jar
- Parent dashboard shows total stars + which activities earned them

6.2 How it handles wrong answers

Never says "wrong." Just a soft "Try again!" with the right answer gently highlighted. No timers. No pressure. The child can always retry.

7. Parent dashboard

Long-press the Attain Jr logo on the splash screen for 3 seconds → enter your PIN.

Section	What you see
 Progress	Books visited, time spent per book, stars earned per activity
 Library	All uploaded books; toggle which ones the child can see
 Voice	Pick the TTS voice for read-to-me; speed slider
 Theme	Pick the child's background palette (5 options, kid-tested)
 Limits	Optional daily-time-limit alarm (gentle reminder, not a hard lock)
 Export	Download a progress report PDF or share a book as standalone HTML

PIN forgotten? Reset by clearing the app's storage from iOS Settings → Safari → Website Data → Attain Jr. (You will lose progress, but books re-import cleanly.)

8. Settings (parent-only)

Font	Atkinson (default), OpenDyslexic, system
Font size	Slider — defaults are larger than Attain
Voice	Filter to child-friendly voices only (e.g. Siri Kate, Karen — depending on iOS)
Speed	0.7×–1.3× (narrower than Attain on purpose)
Auto-play voice	On by default; toggle off if your child reads silently
Sentence focus	On by default; toggle off if it slows the child
Activity difficulty	Beginner / Standard / Challenge — adjusts vocabulary gate, distractor count, and time-of-day suggestions

9. Tips for parents & teachers

- **Reading streak:** 10 minutes a day with the same book builds momentum. The dashboard shows a streak counter.
- **Mix modes:** alternate Read → Flashcards → Story Sequence over a few days for the same book.
- **Pin favorite books** at the top so the child finds them first.
- **Family library:** use Standalone HTML export to AirDrop a book to a sibling's iPad.
- **Quiet mode:** mute voice when reading on the bus / at night without headphones.

10. Troubleshooting

Problem	Fix
Voice silent	iOS Settings → Accessibility → Spoken Content → Voices — download a child-friendly voice once.
Activity feels too easy / hard	Settings → Activity difficulty.
App not loading offline	Make sure you opened it once with internet so the offline cache filled. Then it works fully offline.
Lost PIN	iOS Settings → Safari → Website Data → Attain Jr → delete. Re-set on next launch.
Storage warning	Long-press a book in parent library → Delete. Or export progress report first.

Appendix A — Build plan summary

Attain Jr is one of three planned spinoffs from the Load suite. The plan is captured in `HANDOFF.md` as TASK B and in `attain-jr/NOTES.md`.

Locked deliverable commitment

- Attain Jr will ship as a standalone PWA zip — self-contained folder (index.html + JS + CSS + sw.js + manifest + icons + README + .nojekyll + .gitignore)
- Eventually deployed to its own private GitHub repo on a different account
- Will run on Cloudflare Pages free tier (recommended), Vercel hobby tier (fallback)
- Eventually wrapped as a native iOS app via Capacitor for App Store distribution

Free-stack constraint (locked)

- No paid services, no hosted LLMs, no analytics, no Netlify (explicitly out)
- Vanilla ES5-compatible JavaScript (no arrow fns, template literals, destructuring) for iPad Safari support
- Cloudflare Pages free is the approved free host for private deployment

Scope (locked)

- Location: `attain-jr/` sibling to `attain/` and `study/` in the parent repo
- Service-worker cache namespace: `attain-jr-vNN` (starts at v1)
- Independent manifest, icons, start_url, scope — must not collide with Attain
- Content intake: paste-text and upload only. PDF parsing dropped (kids' books are usually EPUB or plain text)
- Game modes (8): Flashcards, Fill in the Blank, Rhyme Chain, Syllable Tap, Who Said It, Audio Fill the Gap, Story Sequence, Dictation
- Modes dropped from Jr (kept in Attain): Mind Map, Concept Web, Chapter Timeline, Word Morph, Multiple Choice, True/False with Why, Cause and Effect Match
- UI: larger touch targets, brighter palette, simpler navigation, bigger default font, same dyslexia-friendly font stack
- Stricter vocabulary gate: shorter syllable limit on key terms, shorter question sentences, simpler stop-word list tuning
- More positive reinforcement on wrong answers
- COPPA posture — no tracking, no analytics, no network calls beyond initial asset load. Privacy note in-app, parent-readable

Three questions to settle before final build

1. **Age target** — 6-9 or 10-12. Affects reading-level thresholds and which voices are picked.
2. **Final 8-mode list** — is the locked list above correct or should one of Attain's dropped modes be reinstated?
3. **Library** — shared with Attain (parent) or separate kid-safe library?

Design safety principles

1. No external network calls. Ever. Block external hosts at the CSP level.
2. No data leaves the device. All progress in local IndexedDB only.
3. No in-app purchases. Monetize at App Store download or via a separate parent-facing flow if at all.
4. No ads. Ever.
5. Kid-focused COPPA-friendly defaults. No accounts, no email fields, no contact form, no sharing exposed in child mode.

Build order

1. Snapshot first (pre-tool-use snapshot hook).
2. Scaffold `attain-jr/` by duplicating Attain files, stripping the dropped modes, renaming colliding identifiers.
3. Retune thresholds per the age target the user confirms.
4. Rebuild UI for larger touch targets + brighter palette.
5. Verify locally — upload a sample children's text, confirm all 8 modes work.
6. Commit each scaffold / retune / UI / mode-wiring step as a separate commit.

Delivery (when user confirms tested and complete)

Package `attain-jr/` the same way Attain packages: strip the `attain-jr/` prefix from internal paths, add `.nojekyll` + `.gitignore` + `README`, regenerate manifest paths, zip the result. User unpacks into a new private repo on a different GitHub account.

Open backlog after extraction

1. Custom child voice cloning via Piper / XTTS
2. Drawing canvas — child draws on top of book pictures, saved alongside notes
3. Parent shared dashboard across multiple iPads (sync via iCloud Drive optional opt-in only)
4. Sticker pack rewards beyond stars
5. Verse → Picture mode for biblical kids' content (links to ACR Reader's chapters)
6. Bedtime mode — auto-dim, auto-mute after a chapter
7. Multi-language UI (Spanish, Hebrew first)
